The City of Bromfield, CO, hired Mueller Engineering two years ago to design a unique theme for their medians and intersections with one criterion: they needed to be different. Mueller Engineering came up with a very distinctive design for the intersections, splash blocks and median covers. Using the Bomanite Running Belgian Block pattern, Mueller decided to create a wave pattern that would alternate colors. The City then decided to bring Bomanite Licensed Contractor, Colorado Hardscapes, in as a consultant to help with the construction drawings and specification writing. Based on the design from Mueller, Colorado Hardscapes realized that they should form and pour one full band of color at a time, meaning the stamps needed to be the full width (88") of each color specified. This required the making of custom stamps. Colorado Hardscapes created construction drawings and specifications for their bid documents, which were then sent to Bomanite for the manufacturing of the tools. Custom Bomanite Color Hardeners were also developed for this large-scale municipal project, bringing the unique hardscape to life with illuminating colors and textures.
