

Bomanite Toppings Systems

PROJECT PROFILE

PORTOLA PLAZA HOTEL

PROJECT INFORMATION

Bomanite Licensed Contractor, Heritage Bomanite, provided a beach boardwalk look to the existing exterior walkways using Bomanite Toppings Restoration System, Thin-Set. A custom boardwalk pattern stamp was created to fit within the existing control joints. Each plank is 6.5" wide.

Bomanite Thin-Set is a specially formulated polymer modified topping mix that will bond to any stable, structurally sound substrate. This unique system allows the installation of a thin, imprinted concrete topping when installed at 3/8" thick and can be feathered to a zero edge.

Bomanite Thin-Set is an extremely effective alternative to the demolition of an existing substrate. This product adheres to most adhesives and coatings, has excellent abrasion resistance and can be trafficked quickly. It is especially beneficial on applications where natural materials are not possible to install due to clearance issues. In remodeling applications, Bomanite Thin-Set transforms badly damaged concrete into beautiful concrete surfaces at a fraction of the cost of removal or replacement of the existing surface. From retail centers to theme parks, restaurants to hotels, commercial offices to residential applications, Bomanite Thin-Set provides a durable flooring option where the look of brick, slate, stone or wood can be achieved and will appear like other Bomanite, Bomacron surfaces.

This easy-to-install system offers numerous design options for vertical and horizontal applications, inside or outside. Over 100 Bomanite or Bomacron patterns can be utilized with this product and Bomanite's Patène Arctectura coloration system can also be incorporated with this process. Available in 60 standard colors, Bomanite Thin-Set can also be created in a wide variety of custom colors.

PROJECT DETAILS

LOCATION
Monterey, CA

CLIENT
Portola Plaza Hotel

PROJECT DESIGNER
Belling Foster and Steinmetz Landscape Architecture

INSTALL COMPLETED
June 2009
