

Bomanite Toppings Systems

PROJECT PROFILE

BROADSTONE CORNERSTAR APARTMENTS

PROJECT INFORMATION

Client Need: The existing slabs were showing shrinkage cracks from a previous installation, therefore the client needed a product that wouldn't crack, require little maintenance, and add an updated look to the residential complex as well as be weather resistant. **Solution:** Bomanite Toppings Systems, Broadcast Aggregate with Bomanite Florspartic 100 was chosen to replace the flooring on the existing breezeways. This product can be installed in cold temperatures, has a short dry time, high durability, and low maintenance. A great solution for a high-traffic residential complex. The entire courtyard flowed with harmonizing colors and textures inherent in each feature. **Results:** This product had to be installed while tenants were occupying the building, but due to the short dry time it was easier to work around the tenants. This product was an excellent choice because of low maintenance, high durability, high slip-resistance, and a color choice that complimented the exterior finish.
