PROJECT PROFILE

WESTVIEW HIGH SCHOOL

PROJECT INFORMATION

PROJECT SPECIFICATIONS/INFORMATION

Description: Westview High School was a new school construction in San Diego. NTD architects had a vision to form out various areas in the project; a large main courtyard, piano keys, a paint palette, basketballs, and theatre masks that would lead directly into the designated buildings. Traditionally, this would require separate pours of integral color concrete. Just constructing the paint palette would have required eleven colors and eleven pours of integral color concrete. The owners and architects found themselves on a road that the budget would not allow them to pursue. Bomanite Con-Color was the solution. The surface was given a sand finish. Designated areas were saw-cut then the Con-color was applied to different sectors. With the use of 16 Con-Color shades, Bomanite Licensee, T.B. Penick brought the architect's design to life. The results are magnificent. The main courtyard features a circular feather pattern colored in Franciscan Red and Jet Black. Yellow Haze was used to form basketballs heading toward the gym as well as the paint palette. The paint palette itself is an architectural masterpiece featuring 14 colors altogether. Assorted hues were used to paint stools that from overhead would just look like dabs of paint on a palette. The piano keys followed suit as the raised keys were colored black, and the contrasting ground colored white. As you can see, the design options that Con-Color provides are limitless. Bomanite Con-Color allowed both the contractor and architects to achieve their goals. The contractor maintained the budget, the architect, the design
