PROJECT INFORMATION

PROJECT SPECIFICATIONS/INFORMATION

This 1,223 sq.ft. interior commercial project used Micro-Top® by Bomanite White Base and Bomanite Chemical Stain color application throughout. The inspiration behind this project came from the owner who has an additional office utilizing specific colors on his stained concrete floors. B.Jerk Builders approached Progressive Concrete Works, Inc. with the hope to match the floors of the new office with the floors of the existing office. The original office floor was stained directly on the existing slab by another company. The new office required an overlay to be applied before staining due to differences in the base material and the complications of an exact match.

By utilizing the Micro-Top® by Bomanite overlay system and the Bomanite Patene Arctectura Chemical Staining system, Progressive was able to achieve the owners desired look, allowing for a more vivid presentation of the colors. The combination of Rust Red, Burnt Ember and Black Chemical Stains were applied along with Rust Red, Pine and Black in an alternating 8' x 8' scored grid pattern giving a subtle contrast and tasteful flair to the office environment. The floors were then sealed with Bomanite HydroLock and buffed to give sheen and an overall refined appearance.
