

Bomanite Pervious Concrete Systems

PROJECT PROFILE

DENVER WATER DEPARTMENT CREDIT UNION

PROJECT INFORMATION

PROJECT SPECIFICATIONS/INFORMATION

Description: Approx 1,700 feet of Bomanite Grasscrete was installed at the Denver Water Department Credit Union using the GC2 Reusable Formers nearly 20 years ago. The road installed allows heavy equipment access to perform the maintenance such as dredging, grading or cleaning of the retaining pond when required. Both the Grasscrete and the surrounding area were planted with native vegetation and do not receive irrigation such as those areas adjacent to the parking lot. Grasscrete offers the ability to provide year-round access for a variety of applications requiring structural paving surfaces without compromising the aesthetics of the exterior landscaping. Grasscrete is a very sustainable product that can employ a large recycled material content both in the form of aggregate and binder such as fly ash or slag—its lifespan is indefinite and can be recycled itself to form the aggregates for future Grasscrete applications; providing Specifiers with a truly sustainable, eco-friendly system to accommodate a variety of needs.
