

Bomanite Pervious Concrete Systems

PROJECT PROFILE

FORT BRAGG BATTLE COMMAND TRAINING CENTER

PROJECT INFORMATION

Grasscrete was installed at the Fort Bragg Battle Command Training Center (BCTC) providing optimal structural durability for vehicle access. The slab was designed to handle Humvee's and Bradley Fighting Vehicles for battle training exercises. Approximately 112,000 square feet of Grasscrete was poured and filled with crushed stone for maximum percolation rates and low maintenance.

Grasscrete allows you to mitigate drainage issues while maintaining strong structural integrity that allows for some of the heaviest vehicles to operate unencumbered. Grasscrete offers the ability to provide year round access for a variety of applications requiring structural paving surfaces without compromising the aesthetics of the exterior landscaping and is a very sustainable product that can employ a large recycled material content both in the form of aggregate and binder such as fly ash or slag.
