

Bomanite Toppings Systems

PROJECT PROFILE

STOUT NYC – BAR AND RESTAURANT

PROJECT INFORMATION

The Stout Bar offers an old world feel with Bomanite Thin-Set. Bomanite Thin-Set is a specially formulated, polymer-modified topping system applied at a thickness of approximately 3/8-inch. A great design option for virtually any structurally sound surface, old or new, Bomanite Thin-Set offers all the durability, cost effectiveness, and ease of maintenance decorative concrete has to offer.

The Stout Bar, located at John Street in the Wall Street area of NYC, chose Bomanite Thin-Set for their renovated space, giving the restaurant an old world feel with a cobblestone pattern. Approximately 2,400 square feet of the Running Bond Cobblestone stampable overlay pattern was installed. Extensive grinding, clean-up and patching of the existing floor was needed. Application of an epoxy bonding agent was applied and then the Bomanite Thin-Set in Bomanite French Gray Color with Bomanite Cobblestone Gray Color highlights. The newly renovated floor was given a coat of Bomanite Hydrocoat Sealer.

Along with the new flooring a custom 85 foot long concrete bar top was poured and stained with Bomanite Concrete Dye Sweet Potato and protected with Bomanite Florspartic 100 sealer. The owners also received a custom brass Stout Beer Mug logo.

PROJECT DETAILS

LOCATION

New York City, NY

INSTALL COMPLETED

2016
