PROJECT PROFILE

GREAT WOLF LODGE – MINNESOTA

PROJECT INFORMATION

The Great Wolf Lodge opened one of their latest resorts in Bloomington, MN. The Gensler Architect team was hired for the renovation project. With one of a kind entertainment options, Bomanite Licensee, [Bulach Custom Rock](#) (known for their work on themed projects) was able to provide 5,000 square feet of the specified flooring that matched the outdoor adventure theme. With the existing floor in place, Bulach Custom Rock came through with the [Bomanite Thin-Set Stampable Overlay Toppings System](#) in three different patterns that were used intersecting in multiple areas which provided some challenges for the layout. The Great Wolf Adventure Park houses several non-water attractions, including the Rustic Ridge Rock Wall and the Howlers Peak Ropes Course, that guests embark on an invigorating, multi-level climbing challenge traversing over Oliver's Mining Co. where they can search for keepsake gemstones. For the mining area Bulach Custom Rock created the look and feel of actual dirt and stones with the [Bomacron Erosion Series Dried Earth Texture](#) and the [Bomacron Small Sandstone](#) pattern. Additional activities include MagiQuest, the brand's exclusive live-action adventure game where players follow clues and use interactive magic wands to discover relics and runes needed to defeat a fierce dragon. The Bomacron Fishscale Belgian Block pattern was used to create that old world feel of stone castles. The MagiQuest area was produced using the Bomanite Shale Gray Integral Color then utilizing a Bomanite Natural Gray Color Hardener wash before it was sealed. The difficulty of the project was in both access and area control. Whereas multiple trades were utilizing the same spaces at the same time, Bulach Custom Rock installed all the stampable overlay during the overnight hours with the use of mostly temporary lighting. Due to Bomanite Thin-Set's benefits of being trafficked quickly, Bulach Custom Rock was able to have the flooring installed on schedule. Bomanite Thin-Set is a specially formulated polymer modified topping mix that will bond to any stable, structurally sound substrate. This unique system allows the installation of a thin, imprinted concrete topping when installed at 3/8" thick and can be feathered to a zero edge that was helpful when the overlay needed to seamlessly match up to an existing tile floor entrance for the Great Wolf Lodge. Bomanite Thin-Set is an extremely effective alternative to the demolition or remodel of an existing substrate, making it a perfect choice for [the Great Wolf Lodge Renovation](#).
