PROJECT PROFILE

HOPE FELLOWSHIP CHURCH

PROJECT INFORMATION

Hope Fellowship is a 3-campus Bible Church located in Frisco (East campus and West campus) and in McKinney, Texas. Completed late 2018, the newest of the 3 campuses is Frisco East.

Bomanite Licensee, [Texas Bomanite](#) was brought in by [Mycon General Contractors](#) for several architectural concrete applications. The finishes included 31,890 square feet of Class B exposure with Level 3 gloss [Bomanite Patène Teres polished concrete](#) flooring throughout the campus interior, along with 4,850 square feet of Patène Artectura dyed and sealed concrete and 2,820 lineal feet of joints filled with polyurea joint filler. Two custom brown dye colors were selected by the architect to create a warm, earthy and inviting feel.

In a later phase, Texas Bomanite, with offices and crews in Dallas and Austin, refreshed an existing lobby floor to match the new floors. The church asked that the work be completed with minimal daytime disruption. As a result, a crew of 5 worked through the night to complete 3,930 square feet of Class B exposure with Level 3 gloss Bomanite Patène Teres polished concrete.

In addition to the interior floors, 1,800 square feet of [Bomanite Grasscrete pervious concrete](#) was installed by Texas Bomanite using the biodegradable Molded Pulp Former's for the outer areas of the parking lot to decrease the sites overall impervious percentage.

To see other polished and pervious projects installed by Texas bomanite visit their site at:
