PROJECT PROFILE

JONES RESIDENCE DRIVEWAY

PROJECT INFORMATION

The Jones family was looking to update their driveway from the standard concrete that was installed throughout the neighborhood. Located in Burlington, Ontario the homeowners contacted local Canadian Bomanite Licensee, [Bomanite Toronto Ltd](#) to discuss details, options and colors for their exterior concrete project. Bomanite Toronto had 1,830 square feet to work with for the homeowners. Along with the driveway, the front porch design was to be incorporated for an overall cohesive look.

After visiting Bomanite Toronto's showroom and reviewing several samples, color combinations, different patterns and textures, the homeowners chose the Bomanite [Yorkshire Stone imprint pattern](#) set at a 45 Degree angle for an eye-catching design to enhance their driveway and front patio entrance. Yorkshire Stone is a pattern and texture from the [Bomanite Imprint Systems](#) collection that allows for a clean, traditional Ashlar look with a texture similar to English Slate, but with more striation giving an overall Sandstone-like appearance. Yorkshire Stone is appropriate for all applications where consistent depth of tool joints and texture are desired. Yorkshire Stone has a distinct, but light texture that is enough to have a good slip resistance with a light sealer application, that is durable enough and works with the Canadian winters, great for underfoot while taking in the groceries or for kids playing outside. The Yorkshire Stone Pattern is combination of Individual stones available in both a Horizontal and a 45-degree texture in sizes varying from 6" x 24", 12" x 12", 12" x 18", 18" x 18", 18" x 30", 24" x 24", 30" x 30" and 36" x 36" providing a custom pattern and custom fit to any design.

Bomanite Toronto had to work with and around the existing concrete walkway that traveled throughout the residential community in order to install the new driveway entrance. In doing so they collaborated with the homeowners to choose contrasting and complimentary colors that would be cohesive with the existing walk and the house colors. Bomanite Shale Gray Color Hardener and a Gray Release Agent were chosen for the driveway and patio steps. A border was created along the driveway and patio area using Bomanite Brownstone Color Hardener. The patio steps were shaped, textured and colored with the Brownstone Color Hardener giving it a popping edge detail and adding character to the home's exterior, matching the house nicely.

Bomanite Imprinted Concrete surfaces are the most durable surfaces of their type on the marketplace. Correctly placed and finished concrete combined with Bomanite Color Hardener results in long lasting installations that will incur decades of use. The homeowner's choice of using Bomanite Decorative Concrete as an innovative design is a smart investment that will outlast the plain concrete installed in their residential community.

Only Bomanite cast-in-place architectural concrete provides the beauty of natural paving with the durability and affordability of concrete. With more than 200 creative patterns and an endless palette of colors, Bomanite offers an unmatched range of innovative design options to turn ordinary concrete into something extraordinary.

AWARDS: Bomanite Toronto won the 2017 Best Bomanite Imprinted Project under 12,000 Sq. Ft – Silver Award for their extraordinary concrete work.
