

Bomanite Exposed Aggregate Systems

PROJECT PROFILE

TULSA COUNTY FAMILY CENTER FOR JUVENILE JUSTICE

PROJECT INFORMATION

Local Bomanite Licensee, Bomanite of Tulsa, Inc. installed the exterior decorative concrete walkway and front entry for the newly constructed [Tulsa County Family Center for Juvenile Justice](#). The 150,000-square-foot Family Center has three main components. The Juvenile Court, Juvenile Bureau and the multiple agencies that support them are in a two-story building on the west side of the property. The detention facility, with its gym, classrooms and other components, are on the east side. In between sits a courtyard and recreation area that includes a basketball hoop and sports courts.

The new facility reclaims a dilapidated industrial area of downtown Tulsa. With a large footprint and multiple areas needing a comprehensive design, [Selser Schaefer Architects](#) were asked to take on the project. The Juvenile Bureau of the District Court promotes innovative social and rehabilitative services with dignity and respect for children and their families. With this mission in mind, Selser Schaefer Architects created a design that enhances the complex interaction and creates an environment of transparency and hope while incorporating creative applications of economical materials that fit within the existing warehouse context and bridging the gap to the adjacent Tulsa Arts District.

Working with Selser Schaefer Architects, [Bomanite of Tulsa, Inc.](#) prepared several samples of finishes and colors that would work with the overall design and budget of the exterior hardscape. Selser Schaefer Architects ultimately decided on the Bomanite Sandscape Texture Exposed Aggregate System with several colors of gray Bomanite Con-Color in alternating squares of Shale Gray, Cobblestone Gray and Nickel Gray for the exterior walkways and entrance to the Family Center. To enhance the design, words of metal letters (Intervention, empowerment, diversion, prevention, family, community) were embedded into the decorative concrete to bring in an industrial modern artsy element and as a reminder of the mission of the Family Center.

[Bomanite Sandscape® Texture](#) is a highly durable and cost effective architectural concrete finishing option that utilizes specialized concrete mix designs containing select sands and aggregates. Installed by Bomanite Licensed concrete craftsmen throughout the US and Canada, Bomanite Sandscape Texture is the product of choice for projects requiring a decorative and durable finish alternative to traditional concrete paving. Natural, regionally selected and qualified sands such as granite, quartz or limestone are the common aggregates of choice for installations. The natural non-skid properties and abrasion resistant aggregates make Bomanite Sandscape Texture the perfect choice for all exterior concrete applications including walkways, entrances, municipal or public works projects, hospitals, educational facilities, museums, pool decks, plazas and more.

Bomanite of Tulsa, Inc. earned the 2019 Honorable Mention Bomanite Exposed Aggregate Over 6,000 Sq. Ft Award for their craftsmanship and installation of the artistic Bomanite Decorative Concrete walkways and front entrance that met the Architect's design intent, creating an inviting and reflective exterior space for the Family Center for Juvenile Justice.
