PROJECT PROFILE

OWASSO REDBUD FESTIVAL PARK

PROJECT INFORMATION

The Owasso Redbud Festival Park is a community-oriented project for the City of Owasso with a large, open green space encompassing one city block of 2.25 acres. The goal of the City was to create an urban core that brings people downtown to the heart of the city. Gh2 Architects created a design that has an open stage at one end for concerts and a covered farmers market area at the other, providing for an incredibly adaptive and flexible site for any variety of community events. The space also features a splash pad, fire pit, playground, water feature and native plant landscaping.

Local licensee, Bomanite of Tulsa, Inc. had the pleasure of installing the natural looking Bomanite Decorative Concrete starting with the water feature that stretches the length of the park along with a splash pad that emulates a riverbed of rock using a custom Bomanite Imprint System Pattern Chipped Shale along with Bomanite Cobblestone Gray color for a stylized running stream. Accent borders were placed in the pavilion area using the Bomacron Sandstone Texture in the same Cobblestone Gray color to delineate features of the paved area and support the overall design aesthetic of the park as well as provide containment for an area of white, light gray and dark gray concrete pavers.

With well over 400 distinct patterns and associated textures Bomanite has a commanding selection of imprinting tools to select from with the ability to customize your own design like that of the Owasso Redbud Festival Park landscape elements. Bomanite molds are developed from natural products such as stone or wood as well as unconventional surfaces such as metal or plastic or whatever your imagination may bring to the table. Images, logos, borders and highly custom textures are all part of the Bomanite offering. The selection and quality of Bomanite Imprinting Tools is unsurpassed in the industry as well as the quality of people that do the installations.

Superior craftsmanship has always defined the Bomanite brand and sets a Bomanite installation apart from other imprinting contractors and product manufacturers. All Bomanite Licensees receive the most extensive ongoing technical education program in the industry. And it shows in every installation as a reflection of the long standing Bomanite tradition of innovation, service and expertise. The Owasso Redbud Festival Park was a game-changer for not only the Redbud District, but for the city as a whole, bringing opportunities for the community to come together for movie nights, concerts and holiday celebrations, to name a few, where everyone can make wonderful, long-lasting memories.

Bomanite of Tulsa, Inc. received the 2019 Honorable Mention Bomanite Best Imprint Project Award for their custom and creative work for this community project.
