

Bomanite Exposed Aggregate Systems

PROJECT PROFILE

KLEINBURG RESIDENTIAL PATIO AND POOL DECK

PROJECT INFORMATION

The Homeowners sought out Bomanite Toronto located in Canada for a sleek backyard patio and pool deck that would be an entertaining space with easy maintenance. Choosing a design for your outdoor living space is an important decision. Working with Bomanite Toronto's Design Team, the homeowners visited their concrete design center to find inspiration to create their vision. [Bomanite Toronto's Design Center](#) offers a large selection of decorative concrete forms, patterns and finishes along with project photos, floor plans and samples to help build the couple's beautiful contemporary outdoor living space.

A plan was devised for the 1,500 sq. ft. space that satisfied all of the homeowner's needs for them to enjoy any season or time of day. An area for dining, lounging and entertaining were designed. [The Bomanite Exposed Aggregate SandScape Refined System](#) was the final selection for the complete patio and pool deck surface. Choosing concrete as the base with a fine aggregate finish delivers the industrial feel with a modernity style. Wood walls and new plantings soften any hard edges and add privacy, while a pool water feature reduces any neighboring sounds. Artificial Grass strips provide design and functionality. Installed to mitigate drainage issues the grass strips reflect the modern style and define separate areas of use.

The Bomanite SandScape Refined System utilizes specialized concrete mix designs, dry shake color hardener and/or integral color, topical treatments and advanced application procedures to produce a finished product that showcases the fine aggregate. The final product is a unique alternate to other decorative concrete finishes that produces a contemporary monolithic concrete slab with a low life cycle cost due to the pre-aged nature of the surface. Bomanite SandScape Refined is versatile and suited for exterior applications both new construction and major renovation projects. It is a perfect choice anywhere that improved wear resistance for light- to moderate-duty vehicular or foot traffic combined with an architectural finish is a necessity. Due to the use of [Bomanite Color Hardener](#), these highly durable surfaces are available in a multitude of colors, including cost effective light-reflective formulations that may not require the use of white cement to reduce heat island effect. Not only does Bomanite SandScape Refined create the durability needed for busy backyard entertaining but also provides the low-maintenance requirements for a space built for recreation and relaxation, sunbathing by day, dining by moonlight or conversing by fire all awhile beautifully enhancing your home's exterior.

Bomanite Toronto earned the 2019 Honorable Mention Best Bomanite Exposed Aggregate Project under 6,000 sq. ft Award for creating a contemporary outdoor space designed for entertaining and easy maintenance with the Bomanite SandScape Refined System.
