PROJECT PROFILE

VILLAS OF CAVE CREEK

PROJECT INFORMATION

The Villas of Cave Creek owners chose imprinted concrete to blend with the local environment of the Sonoran Desert. With Visitors from around the world, the owners wanted to provide a top notch experience with their stylish villas that are designed to reflect the warmth of the desert, beauty and tranquility of Cave Creek.

All of the granite walkways throughout the property were replaced with the Bomacron Canyon Stone Pattern, proving to be difficult because the area was comprised of 22 villa courtyards with different elevations that required all the grades to be within ADA compliance. An Integral Color along with a flashing of Color Hardener and a tinted Liquid Release were used to provide a realistic stone look. The work was installed at the same time when the property was open to the Villas of Cave Creek guests, which added to the challenge of the project.

Per the General Manager of the villas of Cave Creek "It is very rare to find a contracted crew as organized, friendly and hard working as this team. I received many compliments on how friendly everyone was, always acknowledging our guests and asking how their day was going. I watched many of our guests stand, and in some cases follow, the guys working and asking numerous questions. Your guys always smiled while answering and were very patient with them." The quality of the work is outstanding as you can see in the face of the ramp turn downs which were stripped faced and stamped with the Bomacron Canyon Stone pattern for continuation of the designed walkways.
