

Bomanite Exposed Aggregate Systems

PROJECT PROFILE

PATTERSON RESIDENTIAL DRIVEWAY

PROJECT INFORMATION

The Patterson's contacted local Bomanite Licensee, Bomanite Toronto for design inspiration for their front driveway that would be as awe inspiring as their home. They wanted something that was durable enough for the snowy winters, to be able to handle snow removal equipment and provide low maintenance as well as be fashionable in layout and design.

Bomanite Toronto worked with the homeowners, providing several samples of different systems, aggregates and exposure levels to find the right style and design for their project. The Bomanite SandScape Texture Exposed Aggregate System was chosen with a Buckskin Integral color for the main driveway. Approximately 3,000 square feet of concrete was poured, placed and finished. The banding along the driveway was formed and poured separately using a Limestone textured finish. Designed saw cuts throughout the driveway were also placed as part of the overall design. Exposing the aggregates with a Deep Wash brought out the aggregate colors complementing the brick surface of the basketball court as well as the checkerboard patterned courtyard entry.

Bomanite SandScape Texture is a highly durable and cost effective architectural concrete finishing option that utilizes specialized concrete mix designs containing select sands and aggregates. Installed by Bomanite Licensed concrete craftsmen throughout the US and Canada, Bomanite SandScape Texture is the product of choice for projects requiring a decorative and durable finish alternative to traditional concrete paving. Natural, regionally selected and qualified sands such as granite, quartz or limestone are the common aggregates of choice for installations. The natural non-skid properties and abrasion resistant aggregates make Bomanite SandScape Texture the perfect choice for all exterior concrete applications.

Bomanite Exposed Aggregate surfaces are durable and stylish for residential spaces that can include Driveways, Patios, Walkways and Pool Decks. Correctly placed and finished concrete combined with Bomanite Color Hardener or Bomanite Integral Color results in long lasting installations that will incur decades of use. The homeowner's choice of using Bomanite Decorative Concrete as an eye-catching innovative design is a smart investment. Only Bomanite offers an unmatched range of innovative design options to turn ordinary concrete into something extraordinary.

The SandScape color and finish for the Patterson's Home complements the extravagant courtyard of concrete pavers, grass pattern and stone walls and columns earning Bomanite Toronto a Silver Award for the Best Bomanite Exposed Aggregate Project.
