

## PROJECT PROFILE

### CHURCH OF JESUS CHRIST OF LATTER DAY SAINTS

## PROJECT INFORMATION

The Church of Jesus Christ of Latter Day Saints in Windermere, Florida, underwent a remarkable transformation in 2008, led by Edwards Concrete Company. This project involved the installation of a stunning exposed aggregate walkway that spans an impressive 27,000 square feet, enhancing the temple's exterior and creating a welcoming atmosphere for its congregation. Commencing on January 9, 2008, and completed by April 11 of the same year, the project saw the pouring of over 750 cubic yards of concrete and the installation of 34 tons of steel. The team employed the Bomanite Exposed Aggregate System, using Top Kast to achieve a beautiful, exposed aggregate finish. After allowing the chemical retarder to dry, the surface was pressure washed, revealing the gleaming white crystal quartz within the Bomanite Aggretext. This meticulous process not only elevated the visual appeal but also ensured the walkway's durability. The design requirements called for a clean and holy aesthetic that would align with the serene atmosphere of the Mormon Temple. The goal was to replace previously laid pavers that had become problematic, creating a walkway that would last "100 years" and look even better with age. The choice of materials, including Bomanite's Top Kast and White Bomanite Aggretext, was critical in meeting the client's expectations for both beauty and longevity. Over 10,000 linear feet of decorative saw cuts were made in the installation, featuring four-by-four squares with concave edges. In addition, two-by-two diamond shapes were chiseled out and filled with the white Bomanite Aggretext. The final result was a seamless integration of functionality and elegance, with the entire walkway framed by bands of regular-grade concrete, all meticulously cleaned and sealed upon completion. The project's outcomes have been overwhelmingly positive. The Church of Jesus Christ of Latter Day Saints expressed immense satisfaction with the quality of work delivered by Edwards Concrete, noting the efficiency with which the installation was carried out. The resulting terrace not only complements the spiritual ambiance of the temple but also stands as a lasting feature for generations to come. The impact of this project extends beyond its aesthetic appeal. The newly transformed terrace provides the religious community with a beautifully crafted space to enjoy as they visit the temple. It enhances the spiritual atmosphere, contributing to a peaceful experience for all who enter the sacred grounds. The Windermere Temple project is a testament to the skill and craftsmanship of Edwards Concrete Company, showcasing how decorative concrete can beautifully elevate a sacred space while ensuring durability and longevity. This remarkable transformation adds to the legacy of the Church of Jesus Christ of Latter Day Saints, creating an environment that will be cherished for years to come.
