

REALIZE THE POSSIBILITIES...

Bomanite® PERVIOUS CONCRETE SYSTEMS

BOMANITE ARCHITECTURAL CONCRETE NEWS : VOLUME 21.07

Grasscrete has been a Bomanite System for over 40 years with installations throughout North America in all climate types. Grasscrete is void structured concrete--a pervious pavement system that does not rely on fine aggregate concrete. Grasscrete is cast-in-place with the use of "Formers" by using proven mix designs with no potential for freeze-thaw or clogging issues. It can be used as an exposed utilitarian product for functional applications or as a concealed system with vegetation such as grass or native ground cover.

GREEN FIRE LANE INSTALLED AT WOODLANDS COLLEGE STATION FOR EMERGENCY VEHICLE ACCESS

In the Woodlands of College Station housing development project, the designer's at Kimley-Horn & Assoc., Inc. needed to find a functional and sustainable solution to create a fire lane with sidewalks constructed within to provide access between housing units in case of an emergency. Needing a system fit to support large trucks and heavy vehicle loads, the solution was obvious— [The Grasscrete Fully Concealed System](#)....

GRASSCRETE BENEFITS FOR RETAINING PONDS

Did you know that Grasscrete be used for retaining pond bottoms? Grasscrete is ideal for use as a retaining pond bottom as it is pervious which helps avoid liability issues associated with using non-pervious concrete for retaining pond bottoms. It can also be mechanically scraped which allows for sediment to be excavated periodically using large pieces of equipment while maintaining the root structure of the grass which repopulates to conceal the system to provide a food source and cover for local animal species.
