FLORSPARTIC 100

Imagine

Versatility at its Best

Florspartic 100 is a fast-curing two-part polyaspartic aliphatic polyurea sealer/finish coating for both decorative and protective applications. Being self-priming, the material is applied to a variety of substrates including concrete, wood and metal. It can be applied over decorative concrete surfaces such as stained, ground concrete, polymer-modified cementitious overlays, or employed within seamless multi-build paint chip/quartz flooring systems. Important characteristics of Florspartic 100 include its outstanding penetration and bond strength, UV resistance and excellent color/gloss retention. Florspartic 100 provides excellent impact, abrasion, and chemical resistance. Suitable for high traffic interior or exterior applications, the material is ideal for walkways, commercial applications, industrial facilities, swimming pool decks and garage floors. With zero VOC's, Florspartic 100 has been formulated to be utilized at 100% solids or optionally reduced with green solvents for environmentally sensitive projects.

Imagine The Possibilities.

Long-lasting Durability and Aesthetic Quality

Long-lasting durability and aesthetic quality make Bomanite Florspartic 100 ideal for improving the appearance and value of any flooring project. Bomanite's Licensed Contractors have the capability to install a world class garage floor coating in just one-day that can be driven on within hours, not days.

Minimal Maintenance Saves Time and Money

For your commercial projects Bomanite Florspartic 100 allows for return to service capabilities of just 1-day, saving a tremendous amount of money and time. Designed for maximum abrasion resistance and long-term durability, Bomanite Florspartic 100 is

ideal for high foot traffic areas requiring minimal maintenance. Finished installations do not need to be waxed or polished and are completely impervious to nearly every common chemical.

Unparalleled Performance with a Proven Track Record

Bomanite Florspartic 100 provides unparalleled performance and easy maintenance with the outstanding resistance to abrasion, incidental heat

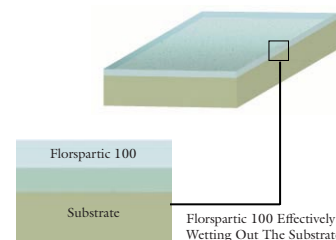

contact, and a vast assortment of industrial chemicals that underscore a proven track record. The Bomanite Florspartic 100 polyaspartic technology has been ASTM tested and proven on countless applications requiring the durability to stand up to heavy machinery and forklift traffic.

Installed By The Best

Rest assured that when you specify Bomanite systems and products your project will be installed by a highly skilled, specially trained and licensed Bomanite Contractor. Contact your local Bomanite Toppings Licensed Contractor today to create durable, sustainable, eco-friendly solutions for your next project with Bomanite Florspartic 100.

Florspartic 100 Benefits

- **Excellent substrate penetration and bond strength**
- **Good abrasion, impact, and wear resistance**
- **UV-resistant; optical clarity of clear sealer/finish**
- **Recoat time, 1-2 hour walk on time**
- **Low temperature cure (-30°F/-34°C)**
- **Excellent chemical and stain resistance, including Skydrol resistance**
